	INFO 276	4	CIS 20	3	
	Choose two from:	4,4	*CIS 5,15A,15B, 17A; GIS 1	3,3	

THE MAJOR:

The computer profession attracts many creative and hardworking people because they find this dynamic field exciting, challenging, and rewarding. The practical approach to computer information systems is unique in the field of computer education in several ways. First, the computer information systems courses are integrated with a fundamental core of business administration courses to meet the needs of the major job market, business and government. Second, the program concentrates on the practical application of how to use the computer to help solve management problems, rather than the engineering aspects of how to design the internal workings of a computer. Third, the program is designed with the student in mind - he or she is prepared not only for well paid employment but also a lifetime of learning and professional growth. If more advanced schooling is desired, the student's preparation will enable

him/her to further specialize in information systems at the graduate level or transfer easily to more generalized business areas.
