	4) Complete 2 additional courses from 2 or 3 above				

**THE MAJOR:**

The way we think, feel and act changes throughout our lifetime. Change is an essential factor of the human experience, and is central to the study of psychology. Psychologists study the on-going change that occurs naturally throughout the human lifespan – physiological and intellectual growth and decline, changing relationships, roles and behaviors. Psychologists work to minimize the effects of negative change caused by trauma, and strive to produce positive change in people’s lives. As a field of inquiry, psychology is very broad. Everything that involves the experience and behavior of humans and animals may be considered appropriate material for the discipline. In short, psychology attempts to explain why organisms act the way they do.
